

Suggestions on Applying Inventory Tags and Labels

Applying Tags to Garments

All garment tags come on a continuous roll for you to cut as you need the tags. There are small lines between tags to act as a guide while you are cutting each one. All tags can be cut with a scissors, a fabric rotary cutter, or a paper cutter. The iron-on tags can be cut with a scissors but a rotary cutter is a easier to use as the material is quite thick.

Roll of 500 tags

Sew-In

Sew-in Tag

The Sew-In tags are easy to sew with any machine. They can be sewn by hand but require a very sharp needle. It is best to **sew around all four edges** so the tag will always lay flat even after multiple washings and cleanings. Look for a seam or edge that will be inconspicuous and not irritating to the person wearing the costume/garment.

You may want to instruct any students or volunteers to think about the **color of the bobbin thread** as it will be showing on the right side of the garment.

** White bobbin thread showing on right side **

** Black thread too close to barcode - won't scan **

****NOTE **** If you are using **BLACK** thread please leave enough space around the barcode so the barcode scanner isn't confused by a line of black thread next to the barcode. In this example the stitching thread is too close to the barcode and the scanner will not be able to read it.

Iron-On (1.5" wide and Tiny (1" x 0.25"))

The Iron-On tags need to be applied with a **HOT iron (350°F or 177° C or more) and a firm hand (press firmly for 6-10 seconds)**. The tag will adhere permanently if you apply it with a hot iron and enough time and pressure. A very firm ironing board or a piece of heavy cardboard or masonite with Ironing board fabric is recommended. Be careful in applying to light weight or synthetic fabrics like nylon or spandex as the high heat may damage the fabrics. See the Tutorial: <http://www.costumeinventory.com/t-iron-on-tags>

Iron-on Tag

We recommend a small iron from Dritz - the **Petite Press™ Mini Iron** which is great for applying these tags in small places. It has a small foot plate which makes it easy to have the iron flat against the entire tag - even in small places. Use heat setting #4 (350° or more) and look for a small amount of glue around the edge of the tag after ironing.

Check the edges of the tag to be sure it is really attached securely to the garment. Iron-on tags can be re-ironed if they come loose. The Petite Press is available from **our store** www.CostumeInventoryStore.com and several sewing and crafts retailers.

Tiny Iron-on Tag 1" x 1/4"

Costume & Theatre Inventory Resources is **not** responsible for loss of tags or damage caused by applying tags.

We provide free samples and encourage customers to test the tags before applying to the collection.

Tagging Gun

For a temporary solution to getting your tags in a lot of costumes/garments we recommend using a fabric tagging gun (like is used for tacking Tutus or putting price tags on clothing). It is very easy to attach the inventory tag to the costume. These plastic threads won't hold the tag on very long if the costume is worn - plus they would be scratchy to the performer - but it works well to get a lot of costumes tagged in a short period of time. Tagging guns are available on-line.

Laundry Pen for Writing on Tags

We recommend the Newhouse No.1 Laundry Pen and Sharpie Ultra Fine point pens to write on the Sew-in and Iron-on tags. Check our blog for a comparison of pens. Both the Newhouse and Sharpie pens are available at Amazon.com. The Staedtler Permanent Laundry marker is also good but has to be shipped from England.

Applying Inventory Labels to Accessories, Shoes & Props

Shoes

The small (or large) regular adhesive and Industrial labels, printed as doubles (one tag per shoe but with the same number), work well to identify shoes. The adhesive labels are peel and stick. They can be repositioned for a few minutes after applying but are permanently adhered after a few hours. Labels can stay in shoes for several months of continuous wear or many years of occasional use if they are placed on the side - not the sole of the shoe. (Note the Iron-on tags also work well on leather boots.)

Note: For extensive wear we recommend the Industrial which are extra sticky and will stay in longer.

Props/Sets and Accessories

Shoes with small adhesive label

Teapot with Tyvek tag and Label

The large or small self-adhesive and Industrial labels can be applied to the prop/set or accessory directly - or - if it is not appropriate for the label to be on the item - it can be put on a shipping tag or hang tag. The Tyvek Shipping tags from our store work well. The Avery manila Shipping Tags # 1 & # 5 work as well. Both tags can be tied with string or twist ties to an item or pinned on (for hats, pillows etc).
